No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 27,

Diagnosing an iron disorder e.g. hemochromatosis or a genetic

0

```
The present invention relates to hereditary hemochromatosis gene products. These proteins may be used to treat a patient diagnosed a having human hemochromatosis disease. It is also useful as a metal chelation agent or as a T-cell differentiation factor, and for

The present sequence represents a probe which is used to detect the brutation S65C in the human histocompatibility iron loading (HFE) protein. The HFE gene is a major histocompatibility (MHC) non-classical class I gene located on chromosome 6p. Mutations in the gene lead to iron disorders. The specification describes a method for diagnosing an iron disorder or a genetic susceptibility to develop the disorder in a mammal. The method comprises determining the presence of a mutation in exon 2 or an intron of a HFE gene or protein. The mutation is not a C of missense mutation at nucleotide 187 of the sequence given in A96769 (Genbank Accession number 160319). The presence of the mutation indicates the disorder or the genetic susceptibility to the disorder. The method is used to diagnose an iron disorder e.g. haemochromatosis, or a genetic susceptibility to develop it.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         0;
susceptibility to develop it, by determining the presence of a mutation in exon 2 or an intron of a histocompatibility iron loading nucleic

The present sequence represents a fragment of the gene to which probe ABL539 hybridises. This probe was used to detect the mutation H63D, which is responsible for haemochromatosis. The probe is used to demonstrate the method of the invention. The specification describes a method for detecting a mutation at position in a target nucleic acid by solid phase amplification process. The region of interest is amplified on at least two separate supports (A. B) using at least one primer linked, at its 5'-end, to the supports. The DNA strands are then separated and strands in the suspension removed by washing. Bound DNA sequences are hybridized to a probe, the 3'-end of which hybridizes up to, at most, position n-1. The probe is elongated by colymerase and a nucleotides in the 5' to 3' direction, using a DNA equences. The dNTP* uncleotide derivative (dNTP*) that is resistant to exonuclease. The dNTP* editored derivative (dNTP*) that is resistant to exonuclease. The wild type for support B. Products are digested with an exonuclease so that only probes elongated by dNTP* are not degraded. The supports are then washed and non-degraded probes detected in directly. The method is used to detect mutations associated with
alleviating iron overload. They may also be used in protein replacement therapy for individuals having a defective human hemochromatosis gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Mutation; solid phase amplification; haemochromatosis; cancer; sickle-cell anaemia; beta-thalassemia; alpha-thalassemia; polymorphism; cystic fibrosis; haemophilia; neurodegeneration; ss.

                                                                                                              0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a new probe for analysing a target nucleic acid comprising of a fluorescent detecting entity consisting of a single-labelled oligonucleotide having a sequence complementary to a locus of the target nucleic acid and a fluorescent label linked to an internal residue of the oligonucleotide. The probe is useful in melting curve analysis, genotyping, detecting pathogens such as Salmonella, and in determining the presence of a target nucleic acid sequence in a biological sample. This polynucleotide sequence represents a probe target of the invention for melting analysis of haemochromatosis-associated
                                                                                                                                                                                                                                                                                                                                                                                                                                  Human probe target HHDT1 of haemochromatosis-associated mutation C187G.

The specification describes a method for detecting a mutation at a particular position in a target nucleic acid. The method comprises binding the target to a solid support, hybridizing a probe to the target, elongating the probe with howelectide(s) resistant to exonuclease, digesting the probe with exonuclease and detecting bound nucleic acid. The mutation is in position "" in a target nucleic acid and the 3' extremity of the probe hybridises to position "". The method is used to detect gene mutations implicated in disease, particularly hereditary genetic diseases, especially sickle cell annual, alpha and beta thalassemias, cystic fibrosis, hemophilia and genes implicated in cancer. The present sequence represents a DNA fragment which comprises a mutation which is implicated in hemochical and of the method of the
       Detecting mutation in target nucleic acid, useful for detecting hereditary genetic diseases, comprises using chip whose electrical or optical property changes relative to the presence of hybridized probe
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Nucleic acids containing electron-transfer group, useful as labels in hybridization assays, e.g. for genotyping, allowing repeat analyses on
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention relates to a composition comprising two nucleic acids each containing an electron-transfer group (ETM) having different redox potentials. The invention is used for electronic detection of nucleic acids, especially of substitutions (mismatches) and single-nucleotide polymorphisms, e.g. for genotyping,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Electron-transfer group; ETM; mismatch; genotyping;

                                                                                                                                                                                                                                                                                         The present invention relates to hereditary hemochromatosis gene products. These proteins may be used to treat a patient diagnosed as having human hemochromatosis disease. It is also useful as a metal chelation agent or as a T-cell differentiation factor, and for alleviating iron overload. They may also be used in protein replacement therapy for individuals having a defective human hemochromatosis gene.

The present invention provides a database of human samples obtained from healthy individuals which can be used to identify polymorphic genetic markers. Data obtained for the database can be used to sort the samples by parameters such as age, sex and ethnicity. This is useful in linking markers with diseases, susceptibility to infection and drug responses. The present sequence was used in an assay to demonstrate the uses of the database of the invention.
                                                                                                           polymorphism; SNP; human; genetic marker; dįsease; infection;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        cerebroprotective, nootropic, neuroprotective; antibacterial; virucide, fungicide; ophthalmological; cytostatic; immunosuppressive; nootropic; neuroprotective; antiallergic; hepatotropic; antidiabetic; antiinflammatory; antiulcer; vulnerapy; anticonvulsant; antibacterial; antiparasitic; cardiant; gene therapy; cancer; immune disorder; cardiovascular disorder; neurological disease; infection; human; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   0;
                                                                                                              the invention trained by ARMA 34497—ARMA 5660) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes were isolated from a range of human tissues disclosed in the genes were isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune haemolytic anaemaia, autoimmune thyroditis, diabetes mellitus, Crohn's disease, multiple sclerosis, rhemmatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial isohaemias, (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and
                                                                                                        The invention relates to human polynucleotides (AAI63803-AAI64012) and
                                                                                                                                                                                                                                                                 (d) wound healing; (e) neurological diseases e.g. cerebral anomal and epilepsy; and (f) infectious diseases such as viral, bacterial, fungal and parasitic infections.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             iron absorption regulator; intracellular iron absorption; lung injury; haemochromatosis; transfusion; thalassaemia; haemolytic anaemia; chronic infection; transferrin receptor; TfR; brain tumour; cancer; oxidative stress disorder; issue damage; vascular disease; inflammation; atherosclerosis; autoimmune disease; inflammatory condition; gene; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                      New isolated nucleic acids and polypeptides, useful for diagnosing, treating and/or preventing human diseases and disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   beta 2 microglobulin; beta2M/HFE monochain; HFE; ischaemia;
                                                                                                                                                                                                                                                                                                                                                                                                                        ;

thalassaemias, haemolytic anaemia or chronic infections, and for thalassaemias, haemolytic anaemia or chronic infections, and for delivering a therapeutic to cells that over-express transferrin receptor (TfR) which are preferably lymphocytes or leukocytes, across the bloodbrain barrier. (I) is further useful for treating brain tumour. (I) is also useful for treating oxidative stress disorders resulting in tissue damage e.g. vascular diseases, inflammation, atherosclerosis, as a platform for drug delivery of therapeutic use for cancer, aroimmune diseases and inflammatory conditions. The monochian manifests specific characteristics advantageous for drug delivery systems. It is a soluble, stable and fully conformed protein. It binds specifically to transferrin receptor (TfR) and therefore targets cells that over-express this receptor. If is continuously internalised by the target cells, thus enabling efficient drug delivery. It dissociates from the receptor in the cells, minimising side effects. It negatively requiates iron absorption, reducing growth of undesired cells and preventing lymphocyte activation.

It is not diluted in the blood as is transferrin. It should not induce an immune response since it is a self non-polyment; protein and delivery of announced to content and delivery or content and delivery of announced the correspondent of the content and proper and processed the correspondent of the content and processed to the content and delivery of announced to correspondent and processed to the content and delivery of announced to correspondent and processed the content and delivery of announced to correspondent and processed to the content and delivery or content and delivery of announced to correspondent and 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a soluble polypeptide (1) of beta 2 microglobulin (beta2m)/HFE monochain comprising human beta2m (or its analogue or active fragment), linked to alphal-alpha3 domains of human HFE (a central regulator of iron absorption; undefined), or its analogue or active fragment, by a flexible linker peptide, or a functional derivative or salt of (1). (1) is useful for reducing intracellular iron absorption in patients having hereditary haemochromatosis, transfusions,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   drugs via monochain is expected to overcome drug-resistance since it is a
                                                                                                                                          Soluble beta 2 microglobulin/HFE monochain useful for treating iron-overload conditions e.g. thalassemia and chronic infections, comprises human beta 2 microglobulin linked to alpha domains of HFE by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

```
This cDNA clone, designated cDNA24, is derived from human gene whose mutated form is associated with hereditary haemochromatosis (HH). It was obtained from a directionally cloned plasmid-based CDNA library following identification of the HH locus in the HLA region of chromosome 6. A single mutation (24d1) in the HH gene appears responsible for the majority of HH disease. This comprises a G to A substitution that is present in 86% of affected chromosomes and in 4% of unaffected chromosomes. It results in a chromosomes and in 4% of unaffected chromosomes. It results in a critical disulphide bridge important for secondary structure. The critical disulphide bridge important for secondary structure. The AT96690, the H437 bp CDNA sequence [13] and their 24d1, 24d2 and 24d7, variants; a clonding or expression vector; host cells; a peptide product chosen from the HH gene product, its variants caldiuss of these; an antibody produced using the peptide; a method residues of these; an antibody produced using the peptide; a method caldius of these; an antibody produced using the peptide; a method cash mutation; an annimal madel for the HH disease; metal differentiation factors and therapeutic agents for mitigation of injury due to oxidative process in vivo or mitigation of injury due to oxidative process in vivo or mitigation of injury due to oxidative process in vivo or mitigation of injury due to oxidative process on vivo or mitigation of injury due to oxidative process on vivo or mitigation of injury due to oxidative process on vivo or mitigation of injury due to oxidative process on vivo or mitigation of injury due to oxidative process or vivo or mitigation of injury due to oxidative process or vivo or mitigation of injury due to oxidative process or vivo or mitigation of injury due to oxidative process or product of a nucleic acid sequence as above; and oligonucleotide directed against a transcriptional product of a nucleic acid sequence as above; and oligonucleotide directed against a transcription of the mannal model
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Hereditary haemochromatosis gene and variants - useful for diagnosis and treatment of hereditary haemochromatosis disease
                                                                                                                                                                                                                                                                                                                                                                  "G to A substitution (24d1 mutation
associated with HH), results in Cys to
Tyr substitution"
"C to G substitution (24d2 mutation) results in His to Asp substitution"
                                                                                                                                                                                           "A to T substitution (24d7 variant) results in Ser to Cys substitution
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Ruddy D, Thomas WJ;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 1440 BP; 347 A; 355 C; 407 G; 331 T; 0 other;

These proteins may be used to treat a patient diagnosed as having human hemochromatosis disease. It is also useful as a metal chelation agent or as a T-cell differentiation factor, and for alleviating iron overload. They may also be used in protein replacement therapy for individuals having a defective human hemochromatosis gene.
                                                                                                                                                                                                                                                                                                                Wolff RK;

The present invention relates to hereditary hemochromatosis gene products. These proteins may be used to treat a patient diagnosed as having human hemochromatosis disease. It is also useful as a metal chelation agent or as a T-cell differentiation factor, and for alleviating iron overload. They may also be used in protein replacement therapy for individuals having a defective human hemochromatosis gene.
                                                                                                                                                                                                                                               Wolff RK;
